

Graduate Study

in MATHEMATICS

The Department of Mathematics at Boise State University offers a graduate program leading to a Master of Science (M.S.) degree in mathematics. The department has strengths in set theory, topology, knot theory, statistics, computational statistics, numerical analysis, and applied and computational mathematics. This expertise is reflected in our dynamic curriculum.

Program

The graduate program in mathematics requires coursework and a culminating experience which will be chosen by the student, in consultation with a supervisory committee, from either a thesis, a project or a comprehensive exam.

Assistantships

We offer competitive teaching assistantships which include a tuition and fee waiver, student health insurance and stipend. An interdisciplinary research fellowship is also available.

Community

The city of Boise has a population just under 200,000 while the metropolitan area is about 500,000. Boise is the center of business and government activity within the state of Idaho providing financial, medical and commercial services. The Boise area climate is pleasant year-round with just enough variation to make the change of seasons enjoyable and a large proportion of sunny days each year. There are abundant recreational opportunities including skiing, white water rafting, fishing and biking.

Application Process

Priority will be given to applications received by February 1, 2006 but all other applications will be considered. Details can be found on our website <http://math.boisestate.edu/grad> or contact us at grad@math.boisestate.edu or write to Graduate Coordinator—Mathematics Department of Mathematics, Boise State University 1910 University Dr., Boise, Idaho 83725-1555 U.S.A.
