What is the Summer Research Community?

The Summer Research Community (SRC) is a unique opportunity for undergraduates engaged in research to celebrate, collaborate, and promote models of exemplary research and scholarship at Boise State. The SRC series includes engaging seminars and networking events for all students, faculty, staff and partners involved in research during the summer. All are welcome to participate.

How to get involved: If you are part of one of the programs on the back page you are already signed up. For all other programs, please contact your research mentor or e-mail stem@boisestate.edu
